

Cotemar completes the installation of the Yaxché-C platform

August 24, 2020

Mexico City, Mexico.- Today, **Grupo Cotemar Group** announced the timely completion of the engineering, procurement, manufacturing, and installation services for the Yaxché-C jacket and platform for Pemex Exploración y Producción off the coast of Campeche.

In 2019, the ruling and respective services agreements for tender **PEP-IR-O-GCSEYP-085-73394.0085190213** were signed and formalized. The contract was awarded to the consortium comprised of Hoc Offshore/Arendal, Commsa, and Cotemar to provide engineering, procurement, and construction services for two marine infrastructure units, Yaxché-C and Onel-B.

Both the jacket and the platform were manufactured by **Cotemar** over a period of 209 days in the city of Tampico, which involved more than 640 Mexican workers, as required by the cost, time, quality, and safety standards established in the agreement. Once completed, all the components were transported by vessel to the Campeche Bay for installation.

In its first-ever collaboration with Cotemar, **Heerema Marine Contractor** was the company responsible for installing the deck and upper platform of Yaxché-C, which indicated that the project was executed safely, without incident, and on schedule. The platform weighs 697.75 tons and the top weighs 849.19 tons.

According to the **National Hydrocarbons Commission** (CNH, Spanish acronym), the Yaxché-C offshore field has proven reserves totaling 18,374 million barrels, 42,738 million possible barrels, and 71,167 million barrels of equivalent crude oil.

An internal source at Cotemar said that “We contribute responsibly to the development of Mexico and the oil sector by working effectively, with excellence, and delivering projects where we apply the highest quality, safety, and environmental protection standard.”

COTEMAR

As a supplier for Pemex for more than four decades, **Grupo Cotemar** has become an essential part of the consolidation of the oil industry and its value chain through its efficient collaboration in each project and because it operates following national and international quality, safety, environmental protection, and health standards.
